

DOCTORS on VACCINES

DR. CAMMY BENTON – board-certified physician

“In medical school, we did not look critically at vaccines. We did not study the risk of adverse events, discuss vaccine ingredients, or talk in any detail about efficacy rates. Instead, we were taught what amounts to little more than propoganda.”

DR. LAWRENCE PALEVSKY – board-certified pediatrician

“The literature is pretty supportive of the fact that vaccines have much greater adverse outcomes on the genotype of the body, the immune system of the body, the brain of the body, and the intracellular functions of the body than we are willing to tell the public about.”

DR. RUSSELL BLAYLOCK – board-certified neurosurgeon

“The problem with our present vaccine policy is that so many vaccines are being given so close together, and over such a long period, that the brain’s immune system is constantly activated. This has been shown experimentally in numerous studies.”

DR. THERESA DEISHER – PhD, Molecular and Cellular Physiology

“Merck’s MMR II vaccine (as well as the chickenpox, Pentacel, and all Hep-A containing vaccines) are manufactured using human fetal cell lines and are heavily contaminated with human fetal DNA from the production process. That level is known to activate Toll-like receptor 9 (TLR9), which can cause autoimmune attacks.”

DR. NANCY BANKS – board-certified obstetrician/gynecologist

“If you look at the ingredients of vaccines, you’ll find that they have mercury, and they have aluminum, and the vaccines are polluted with other kinds of viruses, and the vaccines are grown sometimes on human tissue. So, these are vaccines that have elements that are neurotoxic, and then of course they have other elements that can set up autoimmune reactions. So those are the kinds of things that we’re seeing in the children – we are seeing autoimmune reactions.”

DOCTORS on VACCINES... *continued*

DR. CORNELIA FRANZ – board-certified pediatrician

“I can tell you today, having been in clinical practice for over 30 years, that the children I see today are sicker than they were when I was a resident. They are! It’s like they’re genetically weaker. And we give four times (quadruple) the number of vaccines than we did when I started practice.”

DR. TONI BARK – board-certified physician

“I can only make comments about my own patient population. I can say in my patient population, the kids with chronic illness are the kids who were vaccinated. And the kids that weren't vaccinated, I don't have any of those children on medications. None of them have chronic illness. I can't think of one that has any kind of chronic illness. Not one.”

DR. RACHAEL ROSS – board-certified physician

“With what I now know, I cannot support mandatory vaccines for children. Some kids respond well to vaccines, but others do not. How can we be sure who will and who will not? Should we really sacrifice one for many? Parents have to have the right to choose. Parents have to make their own informed decisions. Parents deserve access to this information which has been buried so deep that even I, a practicing physician, hadn’t been aware of.”

DR. LEE HIEB – orthopaedic surgeon

“At the end of the day, the issue here is one of freedom. And freedom is the freedom to choose, even if we make a bad choice. The argument that I must vaccinate my children for the good of the community is not only scientifically questionable, it is an unethical precept. It is the argument all dictators and totalitarians have used. ‘Comrade, you must work tirelessly for the good of the collective. You must give up your money and property for the good of the collective, and now you must allow us to inject your children with what we deem is good for the collective.’ Our bodies are no longer solely ours – we and our children are able to be commandeered for the ‘greater good.’”
