

THE COVID-19 “VACCINE”

We are incessantly told that getting vaccinated is the only saving grace from COVID-19. **How much do you know about the COVID-19 vaccine? Do you share some of these same concerns?**

CONCERN 1: Previous attempts at developing a coronavirus vaccine triggered **lethal immune-enhancement reactions** when the vaccinated later encountered the wild virus. Could we be seeing this phenomenon now with post-COVID vaccination deaths?

CONCERN 2: COVID-19 vaccines were **fast-tracked, skipped important animal studies**, and were **not tested on people with variable pre-existing health conditions**.

CONCERN 3: Coronavirus vaccine makers were given **full immunity from liability** and **cannot be sued for injuries or death** through a **declaration under the PREP Act**.

Does it make sense to financially incentivize vaccine developers to fast-track a vaccine but NOT make them financially liable for the final safety profile?

CONCERN 4: Evidence is emerging that **mRNA vaccines may affect DNA** through **reverse transcription** and could also trigger severe immune responses / cytokine storms.

CONCERN 5: Some vaccines have been proven to **only mask symptoms, not the actual transmission of the disease**. Are the COVID-19 vaccines among them?

CONCERN 6: There are already reports that **the COVID-19 virus is mutating**. Since the family of coronaviruses are very cold and flu-like, **will a COVID-19 vaccine be just as difficult (or impossible) to nail down as the flu?**

CONCERN 7: The number and seriousness of the **injuries and deaths** already reported to the Vaccine Adverse Events Reporting System (VAERS) **should have halted the COVID-19 vaccine program by now**.

CONCERN 8: By Pfizer’s own admission, evidence is emerging that those who received COVID-19 vaccines may be **transmitting to the unvaccinated**.

CONCERN 9: Despite the fact that COVID-19 vaccines have **ONLY** been given “emergency use authorization” (EUA) and are **NOT fully approved by the FDA**, many universities, schools, and employers are still choosing to mandate them. To what harm?

CONCERN 10: Tragic cases are accumulating of heart issues and death for teens and young adults who have received COVID-19 vaccines. **Why would we administer potentially harmful COVID-19 vaccines to children, teens, or young adults who are not at serious risk of harm from COVID-19?** To do so would be all risk and no benefit.

CONCERN 11: Despite **no data or science to support** a sudden change in recommendation, the CDC is now allowing the COVID-19 vaccine to be co-administered with other vaccines. **Will this gain in convenience be costly in terms of injury and risk?**

CONCERN 12: Vaccine makers’ claims of the effectiveness of their COVID-19 vaccines have been **grossly overstated and misleading**.

CONCERN 13: With bribes, incentives, and rewards being offered to coerce people into getting a COVID-19 vaccine, where is the informed consent? **People deserve to be fully informed of the risks and benefits without being rushed or blinded by incentives.**

CONCERN 14: Many doctors and scientists are looking to spike proteins as the cause for the heart and blood clotting issues we’re seeing with these COVID-19 vaccines.

Many safe, effective, alternative treatments for COVID-19 also exist! Visit our website for more information:
